

5 Things You Wouldn't Have Thought Databases Could Do!

Stefan Keller

Solution (don't cheat!)

1. Playing chess with a database, e.g. with PostgreSQL pgchess
2. Machine learning in the database, e.g. with MindDB and PostgreSQL
3. Running a database in the browser, with WISM, see CrunchyData PostgreSQL Playground
4. Using a database for data transformation, e.g. "data build tool" (dbt).
5. Visualize data directly with DB, e.g. Datasteer-Vega or PostgreSQL pg-vg.
